

Junior/Intermediate Developer

ES3™ is a leading global competitor in the development of interactive television applications. With high profile partners and clients, its fast paced and challenging environment provides for a fulfilling career.

We are a close knit team, looking for a dynamic, determined, and positive individual to contribute their talents towards our exciting product development initiatives.

ES3 is actively seeking individuals that are extremely driven by challenging work, have a passion for programming and enjoy the challenge of learning and applying new technologies.

Ideal candidates will be highly motivated individuals who demonstrate initiative, and are "fanatical" about delivering quality service in a team-oriented environment.

Experience

"There is no substitute for experience"

– Proverb

- Experience with the C#, ASP.NET, SQL and XML
- Experience with the following are a plus: Linq, Enterprise library, Java, Javascript, VBScript, C++
- Exposure to, and understanding of, Design Patterns and OO development and design concepts
- Possesses demonstrated work experience with at least one relational database management system.
- Experience with Visual Studio or similar development environments
- Experience in multiple operating systems.

Qualifications

- Good interpersonal skills, including the ability to follow directions
- Good organizational and problem solving abilities
- Good verbal and written communications skills
- Basic understanding of development process, including specification, documentation and quality assurance.
- Bachelors degree in Computer Science/Computer Engineering/Mathematics highly preferred

We thank applicants for their interest; however, only those candidates that meet the above requirements will be contacted.
